

Sierra Jewell

Toronto, ON • Ph: (647) 685-7048 • sjewell6@my.centennialcollege.ca

JUNIOR SOFTWARE DEVELOPER

Python | C# | Analytical | Problem-solving

HIGHLIGHT OF QUALIFICATIONS

- A proactive and adaptable student of Software Engineering Technology Advanced Diploma
- Foundational knowledge of Agile workflows, application of the SDLC and debugging principles
- Ability to work in a team environment to complete high-quality technical projects with attention to detail
- Self-motivated, taking initiative to further enhance professional skills aligned with industry needs
- Experienced using MS Office Suite and proficiency in Written/Technical Communication

TECHNICAL SKILLS

Programming Languages: Java, Python, C#, SQL, JavaScript

Web Development: HTML, CSS, JavaScript

Programming Concepts: Object-Oriented Programming, Software Development, Problem Solving

Development Tools: VS Code, Eclipse, GitHub, Git Bash, Trello

Operating Systems: Linux/Ubuntu, Windows

Additional Skills: Agile Development, Requirements Analysis, Software Documentation, UML, MS Office, Visio

Frameworks & Technologies: MERN Stack (MongoDB, Express.js, React, Node.js)

EDUCATION

Software Engineering Technology (Co-op) Advanced Diploma

Sept. 2025 - Present

Centennial College, Toronto, ON

Relevant Courses:

Python Programming

Client-Side Web Development

Advanced Databases

Software Systems Design

Software Engineering Fundamentals

Introduction to Database Concepts

Software Requirements Engineering

Unix/Linux Operating Systems

Web Interface Design

C# Programming

Java Programming

Web Application Dev

PROJECTS

Online Shopping Database – Database Development Project

March - April

2026

- Collaborated with a 3-person team to develop a relational database for an online shopping system
- Designed database tables and relationships for customers, products, vendors, inventory, orders, payments, shipping, carts, Wishlist's and reviews
- Implemented primary keys, foreign keys and database constraints to maintain data consistency
- Developed SQL queries using joins, filtering, grouping, sorting, and aggregate functions to support business requirements and generate reports

Documentation - Software Requirements Specification (SRS)

January - April 2026

- In a group of 5 collaborated on designing a pet rescue and adoption platform to support adopters, shelter staff, veterinarians, volunteers and sponsors using object-oriented methodology to define classes and responsibilities
- Developed UML use cases, swim-lane diagrams and class models to represent system requirements
- Documented functional and non-functional requirements and modeled how users and system components interact within the platform

Car Dealership Website - Web Development Project

January 2026

- Designed a multi-page car dealership website using HTML and CSS with a user-friendly interface and navigation between pages to selected services, available vehicles, customer contact and site information
- Implemented organized website layouts featuring vehicle images, customer reviews and dealership information
